NVIM README

Daniel Guldberg Aaes

30 May 2018

Introduction

This document contains a brief explanation of my neovim configuration and the most relevant shortcuts.

Basic settings

mappings	description
\<leader\> m	run makefile
\<space\>	open/close sections

Plugins

Surround

Surround.vim is all about "surroundings": parentheses, brackets, quotes, XML tags, and more. The plugin provides mappings to easily delete, change and add such surroundings in pairs.

in order to change `"Hello world!"` `'"Hello world!"` you just have to type the cmd `cs'"`

Comments

To comment out a section you just have to select the lines with visual node and type `gc` for additional help type `help Commentary`

Move a line/section

You can move whole line or section by selecting it in visual mode and move it with `<A-j/k>`
